PROFILE SUMMARY

Data Analyst with a Diploma in Computer Engineering (final year) and close to a year of self-driven project work in Python, SQL, and Power BI. Comfortable across the analytics workflow end to end — cleaning and exploring data, building interactive Power BI dashboards, and shipping full-stack applications with Django. Two machine learning projects (churn prediction and fake news detection) are live and deployed. Currently building toward a Machine Learning Engineering role, with a strong grounding in data cleaning, database design, and end-to-end analytics.

EDUCATION

Diploma in Computer Engineering

Ch. Bansi Lal Government Polytechnic, Bhiwani, Haryana | 2024 – 2027 (Final Year)

10th (Secondary School)

Government School, Satrod, Hisar, Haryana | 2022 – 2023

TECHNICAL SKILLS

Programming & Data: Python (Pandas, NumPy, Matplotlib, Seaborn), SQLAlchemy, OpenPyXL, ydata-profiling

Databases & SQL: PostgreSQL, MySQL, SQLite, Database Design, Subqueries, Window Functions, CTEs

BI & Visualization: Power BI (DAX, Power Query), Excel, Looker Studio, Figma

Machine Learning & NLP: Scikit-learn, Logistic Regression, NLTK, TF-IDF, Data Preprocessing

Backend & Web: Django, Streamlit, Bootstrap 5, ReportLab

Tools: Git, GitHub, Google Colab, Web Scraping (BeautifulSoup)

PROJECTS

Customer Churn Prediction System | *Python, Scikit-learn, Pandas, Streamlit*

- Built an end-to-end ML pipeline predicting bank customer churn on a 10K-record dataset, from EDA through leak-free preprocessing to a deployed Streamlit app
- Applied One-Hot Encoding and StandardScaler fit only on the train split; reported class-wise precision, recall, F1 and ROC-AUC on imbalanced data (80.8% accuracy)
- Deployed as a live interactive app with real-time churn probability predictions

Fake News Detection AI | *Python, Scikit-learn, NLTK, TF-IDF, Streamlit*

- Built an NLP classification pipeline (tokenization, stopword removal, Porter stemming) with TF-IDF vectorization and Logistic Regression, achieving 97% accuracy on ~45.7K labeled articles
- Deployed as a live Streamlit app with cached inference and confidence-score predictions

StockFlow — Inventory & Order Management | *Django, PostgreSQL, Bootstrap 5, ReportLab*

- Built a full-stack Django inventory system with auto stock adjustment via signals, overselling protection, and role-based access for Owner/Staff users
- Implemented a low-stock dashboard, sales reporting via ORM aggregation, and on-demand PDF invoice generation

Ride Booking Analytics Dashboard | *Power BI, Python, DAX, Pandas*

- Analyzed 150,000+ ride bookings across 21 variables covering booking status, demand, revenue, and cancellations
- Built a full Power BI dashboard with DAX measures and dynamic slicers after EDA and data cleaning in Python

Customer Segmentation — SQL Analysis | *PostgreSQL, CTEs, Window Functions*

- Segmented customers into behavioral cohorts using RFM (Recency, Frequency, Monetary) logic in pure SQL
- Used CTEs, window functions, and GROUP BY aggregations to identify high-value, at-risk, and dormant customer groups

CERTIFICATIONS

- Microsoft Power BI (Self Learning) — Skill Course, ISO 9001:2015 Certified
- 30-Days SQL Micro Course — Skill Course / CoursePe
- Prompt Engineering — Vedam School of Technology (CodeSprint)
- C & C++ Programming Certification — iTronix Solutions
- Resume Writing & Job Interviewing — HP LIFE / HP Foundation
